

# Miroir CODE

[packages](#), [apt](#), [aptly](#), [dépôt](#), [miroir](#), [code](#)

Collabora Online Developer Edition est le dépôt communautaire de Collabora Online.

Nous importons la clé GPG du dépôt

```
wget -q -O -
https://collaboraoffice.com/downloads/gpg/collaboraonline-release-keyring.gpg | gpg --no-default-keyring --keyring trustedkeys.gpg --import
```

Nous créons le miroir

```
aptly mirror create -architectures=amd64 bullseye-code
https://www.collaboraoffice.com/repos/CollaboraOnline/CODE-debian11 ./ main
```

Nous mettons à jour le miroir local

```
aptly mirror update bullseye-code
```

Nous créons un snapshot

```
aptly snapshot create bullseye-code-230427 from mirror bullseye-code
```

Nous publions le snapshot

```
aptly publish snapshot -distribution=bullseye-code -component=main bullseye-code-230427 debian
```

Si le dépôt a déjà été publié, nous “switchons” le snapshot

```
aptly publish switch bullseye-code debian bullseye-code-230427
```
