

Installation Debian

[infrastructure](#), [gestion](#), [configuration](#), [lifecycle](#), [The Foreman](#), [installation](#), [Debian](#)

Installation des paquets

Nous installons les paquets nécessaires

```
sudo aptitude install ca-certificates gnupg apt-transport-https  
cd /tmp && wget https://apt.puppet.com/puppet6-release-buster.deb  
sudo dpkg -i /tmp/puppet6-release-buster.deb
```

Nous créons sources list /etc/apt/sources.list.d/foreman.list et y collons

```
##  
# The Foreman repositories  
# Version: 2.3 / Buster  
  
deb http://deb.theforeman.org/ buster 2.2  
deb http://deb.theforeman.org/ plugins 2.2
```

Nous intégrons la clé GPG du dépôt

```
wget -q https://deb.theforeman.org/pubkey.gpg -O- | sudo apt-key add -
```

Nous installons l'installateur Foreman

```
sudo aptitude update && sudo aptitude install foreman-installer
```

Installation de Foreman

Nous lançons l'installateur

```
sudo foreman-installer --enable-foreman-cli-ansible --enable-foreman-cli-discovery --enable-foreman-cli-remote-execution \  
--enable-foreman-cli-tasks --enable-foreman-cli-templates --enable-foreman-plugin-ansible --enable-foreman-plugin-bootdisk \  
--enable-foreman-plugin-discovery --enable-foreman-plugin-remote-execution --enable-foreman-plugin-setup \  
--enable-foreman-plugin-statistics --enable-foreman-plugin-tasks --enable-foreman-plugin-templates --enable-foreman-proxy-plugin-ansible \  
--foreman-initial-admin-username=groadmin --foreman-initial-organization=grohub --foreman-initial-location=vinon
```
